

HyperForms

The Next Generation of Forms Generation

HyperForms Key Features and Benefits:

- Generate court forms up to 20 times faster than current word processor-based methods.
- Remove interrupting and annoying screen flashing caused by macro execution and enable the user to retain control of their workstation.
- Conversion and maintenance of your form template library as XML, significantly reducing the amount of time required to make changes.
- Reduction in the number of software licenses needed for Microsoft® Office Word.
- The HyperForms Autocheck™ feature eliminates misfiling of court forms often associated with batch processing.

Automated document generation represents the single largest operation in today's court management systems. The HyperForms add-on for CourtView enables courts of all sizes to make short work of that task. Whether generating a single form or large batches of forms, users will immediately realize up to a 95% reduction in the amount of time required to produce documents!

HyperForms is a high-speed upgrade to the standard forms generation method utilized within the CourtView CMS. Documents can be generated in as little as 1/10th of a second, drastically increasing the productivity of limited resources. Misfiled court forms become a thing of the past with the HyperForms automatic data integrity checking feature, Autocheck™.

Part of the HyperCourt Solutions Suite for CourtView

HyperForms is part of the HyperCourt Solutions Suite for CourtView, which enables customers to implement additional functionality as needed, including:

- A browser-based interface for accessing all court forms from a single screen.
- A full document management system including real-time document image creation.
- Queue-based workflow with user-configurable settings.
- "Carbon-copy" eSignature functionality enabling citizens and attorneys to sign multiple documents with one action.
- Integrated role-based instant messaging to eliminate disruptive telephone calls to court rooms in order to simply exchange information.
