

eB1 Asset Discovery Manager

HyperAgent™ Technology

- Single Agent technology
- Multi-level Monitoring and Reporting
- Real time one second data collection and reporting
- Web based and WAP enabled
- Highly Flexible
- Any Platform - Windows, Unix, Linux, AS/400 and OS/390
- Any Database - SQL Server, Oracle, Informix, DB2 and Sybase
- Highly Secure

Key Features

- Auto Discovery
- Monitoring
- Asset History
- Reporting and Data Transfer

Product Overview

The eB1 Asset Discovery Manager is a powerful solution for discovering IT assets in any business environment. It provides full-featured asset tracking capabilities through automated discovery, hardware inventory, network inventory, software inventory, software usage monitoring, license management and extensive cross-platform reporting. By managing IT assets on various operating platforms, it provides a comprehensive assessment of your IT asset base. Using our HyperAgent™ technology, **this is all done without placing any software on the devices being tracked thus making this process totally invisible to the end user.**

**Superior Real-Time Monitoring, Management, and Reporting of
Servers, Applications, Networks, Databases, Desktops
& Other Devices with a Single Agent**

Product Information

The eB1 Asset Discovery Manager allows you to discover and track every IT asset that is connected to your network without placing any software on the devices being tracked thus making this process totally invisible to the end user.

Components:

- **Discovery** - You will be able to discover the following items on the network:
 - Hardware – Desktops and Laptops
 - Sample of the data to be captured – IP address, User, Make (in some cases), Model, Installed Memory, Disk Space (available and allocated), Operating System and release level, Processor, Processor Speed and Virus Definition Level
 - Software – All software that is installed on the above hardware
 - Sample of the data to be captured – Software Title, Installed Date, and Last Used
 - Network Infrastructure – Routers, Switches, IP Telephones, Printers, Multi-Functional Devices and any IP device
 - Data captured – Vendor and Model
- **Monitoring** - You will be able to monitor all adds, changes, deletes and moves, as often as you desire. You determine how often this process is done.
- **Asset History** - A historical record of each item discovered will be maintained
- **Reporting and Data Transfer**
 - Reporting – We have a number of pre-defined reports and they give you the ability to create your own.
 - Data Transfer – All data collected can be exported to other software packages via a flat file.

Solutions

- Hardware inventory
- Network inventory
- Software inventory
- Software usage monitoring
- License management
- Virus Definition Reporting and DAT File Pushing

**Superior Real-Time Monitoring, Management, and Reporting of
Servers, Applications, Networks, Databases, Desktops
& Other Devices with a Single Agent**
